

# Elevate your safety and efficiency to new heights with **Spider X**

## Keypad for Ease of Use

The virtual keypad (via the Spidertracks app) or external keypad (optional extra) allows for easy access to the MARK, WATCH, and SOS buttons.

## Easy to Install

Designed specifically with aviators in mind, the simple plug and play device is ready to go. An external antenna option is also available.

## Control LED Brightness

Increase or decrease via the app and fly distraction-free. Beneficial for NVG operators.

## Virtual FDR™

Access and download digital flight data from your aircraft, review flight history via reporting dashboards so you can make safer, smarter decisions.

[LEARN MORE](#)

## High Resolution Flight Data Monitoring

Included with Virtual FDR™, you can view an incredibly accurate representation of an aircraft's flight path.

## Wireless Connectivity

No SD cards, no hassle. Spider X downloads flight data and updates to the latest firmware wirelessly.

## Bluetooth Connectivity

Pair Spider X with our Spidertracks App, available on all iOS and Android devices. View live flights, flight history, and communicate to your aircraft with Spidertxt - our reliable two-way messaging service, even when you are outside of cellular range.

## Prominent SOS Button

With one push, you and your team will be instantly alerted that an SOS event is occurring and your emergency management process will begin automatically.
